

The software dedicated to the **calculation, validation & generation** of the entire regulatory reports set.

Reports production in only 5 steps.

An easy way to **manage reports production** and follow-up.

The tool to **manage data** easily.

Worldwide actuarial software. Local expertise. Worldwide presence.
Big capacity & performance driven actuarial software.
User friendly, Solvency II & SST compliant, IT integration.

addactis® One generates your whole range of regulatory reports using XBRL and Microsoft Excel® technologies and covers the entire supply chain, from data production to XBRL conversion including validations of taxonomy assertions for all reports to be transmitted to supervisory authorities.

Moreover addactis® One has been structured to provide you with your own reporting templates and data checks.

addactis® One is based on a dedicated database centralizing and archiving both reports and calculation models along with full audit trail.

The complete backup of reports, calculation models, taxonomies and business settings (LoBs, Ring-Fenced Funds, Matching Adjustment Portfolios, etc.) allows you to regenerate identical reports at any moment. You can

review the qualitative and quantitative reports previously sent to the regulator at any time.

In this single framework, you can carry out intra/inter reports consistency tests and see at any time your project's progress thanks to powerful dashboards.

The dedicated user and profile management feature allows controlling access to the system and organizing the reporting process between your departments. With the user friendly interface, you will not have to worry about XBRL's complexity.

addactis® One enables easy data importation. In particular it provides a direct connection to addactis® Modeling our modeling platform and to addactis® Workflow our data & process integration platform.
