

addactis® Workflow

addactis® Workflow

The powerful platform designed **to structure and automate all insurance processes** in a single framework.

A **user friendly tool** to automate insurance processes.

A software providing a full range of tools to **extract or transform data**.

Embed addactis® software in an automated and **fully audit trailed process**.

addactis® Workflow

Worldwide actuarial software. Local expertise. Worldwide presence.

Big capacity & performance driven actuarial software.

User friendly, Solvency II & SST compliant, IT integration.

The new upcoming regulatory requirements (SOX, Solvency II, IFRS) have generated real challenges for (re)insurers who have to integrate all their processes in a controlled environment. In this context, data integration and process monitoring become one of the key areas for improvements.

The addactis® Workflow solution is a new generation platform for data & process integration within your organization. It provides users with full autonomy during each and every phase of data manipulation process. It enables to format and integrate data coming from different platforms/systems in a fully transparent way.

Thanks to multi-thread, multi-core technology and flow management, addactis® Workflow has no limit in terms of data volume and can therefore perform complex and large data transformations in a very limited time frame.

Data coming from different platforms are formatted and integrated into a uniformly formatted/coded environment without interference and without substitution to the existing mainframes.

addactis® Workflow is fully flexible to future changes for example, the data, the output requirements or changes in the existing mainframes can easily be adjusted. Set up and documentation are facilitated by a "drag & drop" visual tool.

addactis® Workflow guarantees a robust audit trail to all information processes and a complete data tracking during each step of each project. Ultimately, it is expected that the efficiency of reporting processes can be improved significantly with addactis® Workflow, in terms of speed, complexity and transparency.
